Profile Summary

First-year ECE student at IIIT Bhagalpur with hands-on full-stack experience in the MERN/PERN stack. Built a strong algorithmic foundation by solving 646+ DSA problems over 177 active days of practice. Currently developing City-Link, a real-world relocation platform for university students, handling everything from authentication through database design. Actively seeking SWE internships to contribute to engineering teams and ship real code.

Education

•Indian Institute Of Information Technology, Bhagalpur *2025 – 2029*
B.Tech in Electronics and Communication Engineering (1st Year) CGPA: 8.35

Technical Skills

Languages: JavaScript, TypeScript, C++, SQL
Web Technologies: React.js, Node.js, Express.js, HTML/CSS, Tailwind CSS, Bootstrap
Databases & Tools: PostgreSQL, pgAdmin, Git, GitHub, REST APIs
Core Coursework: Data Structures and Algorithms, Object-Oriented Programming

Projects & Open Source

•City-Link | *In Progress (Live Demo)* *React.js, Node.js, Express, PostgreSQL*
Full-stack relocation and housing platform tailored for migrating university students.
- Built a Node.js/Express REST API with JWT-based authentication and bcrypt password hashing; implemented a student ID verification flow.
- Built a responsive React frontend with Tailwind CSS, implementing protected routes, form validation, and reusable component architecture; integrated with backend via Axios with error-handling middleware.

•Developer Portfolio | *Live* *React.js, JavaScript, Tailwind CSS*
Single Page Application (SPA) designed to aggregate developer metrics and projects.
- Built a responsive SPA to present a technical breakdown of GitHub contributions and active repositories.
- Implemented React state management and dynamic routing to ensure seamless cross-device navigation.

•FitMart | *Open Source Contribution* *React.js, JavaScript, Git*
Contributed to an open-source MERN stack e-commerce application for premium fitness gear.
- Traced a UI rendering bug through an unfamiliar MERN codebase using browser DevTools and React component inspection to identify the root cause.
- Submitted a reviewed and merged Pull Request fixing a state management issue within the checkout flow, addressing reviewer feedback across revision cycles.

Achievements & Problem Solving

•Data Structures & Algorithms *2025 – Present*
Maintained rigorous problem-solving discipline with 177 total active days, solving 646+ problems across LeetCode , GFG, and HackerRank.

•Competitive Programming *2025 – Present*
Competed in 44 timed coding contests on CodeChef (Max Rating: 1404) , LeetCode and Codeforces focusing on algorithmic optimization and time-complexity reduction.

•Version Control & Development *2025 – Present*
Maintained a highly active open-source footprint with 246 total GitHub contributions, 220 commits, and 4 successful Pull Requests .
